

Improving Quality of Work, and taking Project Leads for Optimal Performance.

Overview

While working at Digital Medicine Society, I completed tasks that enhanced workflow and delivered high-quality performance on diverse projects. In this case study, I will showcase the work challenges I tackled and the work qualities that enabled me to overcome them.

Wordpress

Slack

Miro

Asana

Adaptability

Prior to my role at DiMe, I had no experience with Wordpress as I typically code websites from scratch. Although this posed an initial challenge for my employers, I was determined to learn the necessary skills and demonstrate my adaptability without hindering the company's progress. I quickly acquired proficiency in using Wordpress and tackled the tasks at hand with a problem-solving approach, delivering efficient and high-quality work that pleased my colleagues.

DiMe Projects

I feel extremely fortunate to have had the opportunity to utilize my skillset at DiMe. I was entrusted with various projects, including redesigning/developing or incorporating new features into project websites/pages.

CancerX

- Worked on the Development of webpage
- Project co-hosted by Moffitt Cancer Center and Digital Medicine Society (DiMe)
- Announced by The White House
